

» **SATURNO 3** Automatic cutting machine Cad/Cam System
INSOLES - COUNTERS - SOLES - MULTIPLE LAYER -

We prepared a new digital version to enrich the **Saturno** range (Saturno 2 and saturno 2.2). This new digital version has a powerful architecture for the management of the user interface and for the external management of CAD / CAM system. The use of a latest generation processor allows now the real-time control of the machines

The use of digital technology for the servo drives, the servomotors and the mandrel, controlled by the new digital CNC, contributes significantly to improving the ratio "precision/time" in high speed machining.

Now we can have more speed, more production and more cutting precision. In particular we can increase the quality cut on multiple sheets.

At the end we also prepared a restyling to improve the dexterity of the operator without important modifications on the basic line of the machine.

TECHNICAL DATA

Production 1200 pairs/h

Air 150 l/m 7 Bar

Voltage 400 Volt 50-60 Hz

Dimension 3,20 x 2,20 x h 1,65

Power 4 kW

WEIGHT 1800 kg
